# Honeywell RMU Program | IR-148 and SPM Upgrade

Regions Affected: **Global**

Dear Customers and Colleagues,

Honeywell values your loyalty and appreciates your business. We have also been hard at work developing the latest gas measurement and detection technology. Harmonizing these to help you in maximizing your safety, we are excited to announce our Retrofit, Migration, and Upgrade (RMU) program to streamline the process of updating your legacy system with the most current technology.

Customers may take advantage of two potential RMU programs. First, get extended warranties which are available on new devices that replace legacy systems. Second, realize automated sensor or chemcassette order and shipment via our Consumable as a Service (CONaaS) program where sensors and chemcassettes are shipped in time to replace the end-of-service-life component. The CONaaS program offers an option to cover supply for a two-year period based on the published service life of your component.

Several internal components of the IR-148 and SPM gas detection systems have reached their end of life. Spare parts are no longer available, and should any one of those fail, your system would not be fully recoverable, and your facility would be exposed to the risk of insufficient gas detection equipment. Fortunately, an upgrade solution is available with Honeywell’s SPM Flex upgrade program. The upgrade will include replacing IR-148 or SPM systems with SPM Flex.

Knowing that it takes time to remedy a failed system, we urge you to consider a proactive approach and ask about our Analyzer upgrade offering. Listed below are the SKUs for extended warranties and CONaaS on the various upgrade options.

### **Terms and Conditions**

Sensor as a Service (SENaas) aims to provide consumable sensors or chemcassettes sufficient to cover the defined period based on the consumable's normal life expectancy. The actual number of sensors and chemcassettes are not to exceed the value defined in the description "N" where Nx is the total number of consumables that will be provided. Replacement consumables will be shipped four weeks in advance of the installed consumable's estimated end of service life. This program does not include shipping, installation, startup, or calibration. A quote for the labor to install, startup, and calibrate the consumable is available upon request.

Terms and Conditions for the extended warranties are as defined in the original equipment sale, where the only difference is one additional year of similar coverage.

This program offers only one extended warranty year per device. Quotes for multiple-year extended warranties are available upon request.

All sales of goods or services referenced in this offer are conditioned upon the terms and conditions set forth in Honeywell's Process Measurement and Control (PMC) Terms and Conditions of Sale for the relevant region, found at: <https://automation.honeywell.com/us/en/support/ia-terms-and-conditions-of-sale#process-measurement-control-pmc>.
